0.5mm and 1.0mm Flex Connectors

FH12, FH12F and FH12S Series — "Flip-Lock" SMT/ZIF Type Flexible Printed Circuit Board Connectors

The FH12 Series of miniature connectors for FPC/FFC use brings form to the newly developed "flip-lock" concept and can be used with Surface Mount Technology (SMT) to eliminate the problems of the contemporary slide-lock system. These connectors have a contact spacing of 0.5mm, are suited to high density mounting, and are based on a single-action Zero Insertion Force (ZIF) structure for easy connections. Types with top or bottom contacts, and vertical mounting are available to suit your applications.

Materials/Finish: • **Insulation**: Polyamide Resin, beige; PPS Resin, dark brown (UL94V-0) • **Contacts**: Phosphor Bronze, solder plating

Electrical: • **Rated Current**: 0.4A • **Insulation Resistance**: 500MΩ or greater at 100VDC • **Withstanding Voltage**: 150VAC for one minute • **Contact Resistance**: 50mΩ or less ***(Note:** When all conductors are to continuously carry the rated current, set the current to 70% of the rated current value.)*

1mm Flex Connectors

1mm Pitch Flexible Printed Circuit Connectors (Figures 1 and 2)

Features: • High-density packaging achieved by 1mm pitch contacts • Dual-side contact construction allows FPC and FFC conductors to be inserted in either direction • Enhanced contact reliability through high contact pressure • Applicable to 0.25mm to 0.35mm thick flexible printed circuit boards • Uses PBT (UL94V-0) insulating materials which are highly resistant to solvents and high temperature • Kinked dip posts for board retention during wave soldering **Material/Finish:** • **Insulator:** Polybutylene Phthalate, black • **Contacts:** Phosphor Bronze, tin-lead plated **Electrical:** • **Rated Current:** 0.5A • **Insulation Resistance:** At 100VDC, 500MΩ minimum • **Withstanding Voltage:** 150VAC for 1 minute • **Contact Resistance:** 40mΩ maximum

SMT ZIF Type Flexible PCB Connectors (Figures 3 and 4)

Features: • Low profile type with 3mm packaged height; 1mm pitch permits high-density packaging • Excellent workability is offered by the ZIF structure which provides positive contact by only lightly inserting FPC/FFC and then pushing in the movable locking flap • Recommended thickness of flexible circuit board is 0.25mm to 0.30mm. • PPS (UL94V-0) with excellent solvent resistance and high temperature resistance is used for the insulation material • The SMT type connectors permit high density and automatic packaging on circuit boards **Material/Finish:** • **Insulator:** PPS Resin, natural finish • **Contacts:** Phosphor Bronze, tin plating **Electrical:** • **Rated Current:** 0.5A • **Insulator Resistance:** 500MΩ at 100VDC minimum • **Withstanding Voltage:** 150VAC for 1 minute at specified value • **Contact Resistance:** 25mΩ maximum

EH Series 2.5mm Connectors

Features: • Compact and Slim: This connector is designed to be compact and unusually thin. It measures only 8.1mm (.319") high after mounting and is just 3.8mm (.150") wide. • Highly Reliable Contact: The contact has long dimples near the center that ensure continuity of low voltage and low current circuits at all times, even under conditions of vibration and abusive prying. • Polarizing Guides: The header and housing have guides to prevent improper mating. • Whisker Prevention: The contact material is treated with a reflow process, and the square post is copper-undercoated and tin/lead-plated for whisker prevention. • Easy and Effective Crimping: Although the contact is compact, it has a long wire strip length, 2.6 ± 0.4mm (.102" ± .016"). This long length is very useful for automatic crimping and when crimping shielded wires.

Specifications: • Current Rating: 3A AC/DC (22 AWG). • Voltage Rating: 250V AC/DC. • Temperature Range: -25°C ~ 85°C. • Applicable Wire: 32 ~ 22 AWG.

Material and Finish: • Contact: Phosphor bronze, tin-plated. • Housing: Nylon 66, UL94V-0, natural (white). • Posts for Headers: Brass, copper-undercoated, tin/lead plated. • Wafer: Nylon 66, UL94V-0, natural (white).

Applicable PC Board Thickness: • 0.8 ~ 1.6mm (.031" ~ .063").

SCSI Terminators

SCSI TYPES:

Single-Ended Active: Allows up to 5 megabytes per second. Also referred to as "Regulated" or "Boulay." These terminators include a voltage regulator along with resistors and capacitors. They support applications requiring longer cable lengths and faster data transmission rates. • Eighteen 1100 resistors • Three or more capacitors • Two voltage reference resistors • One voltage regulator

Differential: Allows up to 10 megabytes per second, cable lengths up to 25 meters • Requires more powerful drivers than single-ended • Ideal impedance match, 122Ω

Force Perfect: Use with near non-SCSI applications wherein the larger bandwidth and faster risetimes create special problems; compensates for variances by averaging the impedance mismatches through diode switching and biasing techniques. Circuitry: Thick film resistors and/or discreet components on aluminum substrate or plastic laminate

Active Negation: Used by SCSI-2 and SCSI-3 Drivers and Receivers in single ended active applications to help ensure clean, noise-free transitions of the signals. These terminators can source as well as sink current, thereby maintaining voltage control.

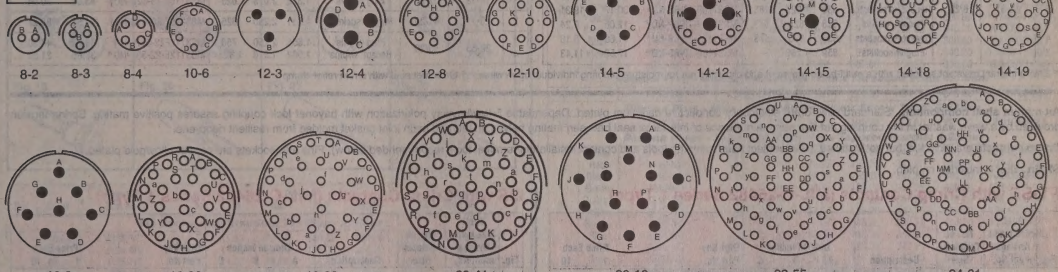
Drawings not to scale



Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Solder contacts are installed. Pins and sockets are copper alloy/gold plated.

PT solder series is UL recognized under file #E115497, Section 5

* Environmental resistant supplied with a multi-holed grommet and clamping nut for moisture-proofing individual open wires † Grommet seal with strain relief clamp

Aluminum shell components. Standard olive drab, electrically conductive cadmium plated. Dependable 5 key/keyway polarization with bayonet lock coupling assures positive mating. Spring tension provided by a wave washer in the coupling nut ensures maintenance of interfacial seal between mating halves. Insert and main joint gasket molded from resilient neoprene.

Crimp contacts are included, but not installed. (See contact hand crimping tools and contact installation/removal tools recommended below). Pins and sockets are copper alloy/gold plated.

Strain relief is included on plug.

SMK (2.92mm) Connectors

SMK Connectors provide an excellent solution for applications requiring high frequency transmission. Similar to the SMA interface, a smaller internal body diameter (2.92mm) and air dielectric provide a higher cutoff frequency and other key advantages: • Superior electrical performance to 40GHz • Female contacts have a three-slot construction, which enhances connectivity • The Field Replacement Jacks with a high quality hermetic seal feed thru for use in sealed circuit modules • The SMK plug interface employs more precise dimensions than an SMA and uses a shorter snub nose male pin such that the connector bodies align before the contacts engage

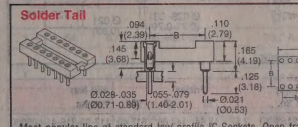
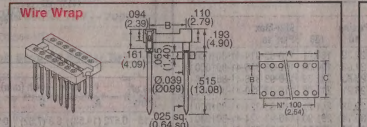
Dual-In-Line Sockets – Open Frame (Screw Machined)

Solder Tail



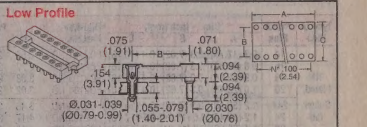
Most popular line of standard low profile IC-Sockets. Open frame design leaves space beneath IC for improved heat dissipation, easier PCB cleaning and inspection. **Insertion Characteristics:** 4-finger standard **Plating: For ED3308-ED3964:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED3108-ED3764:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) –150µ" Sn. **For ED56083-ED56646:** Sleeve (Pin) – 10µ" Au. Contact (Clip) – 30µ" Au.

Wire Wrap



Solderless wire wrap terminals are firmly locked in the insulator body to withstand torque of wrapping tool. Length of terminal for three-level wrapping. **Insertion Characteristics:** 4-finger standard **Plating: For ED4308-ED4964:** Sleeve (Pin – 200µ" Sn. Contact (Clip) – 30µ" Au. **For ED57083-ED57406:** Sleeve (Pin) – 10µ" Au. Contact (Clip) – 30µ" Au.

Low Profile



"Ultra low profile" Dual-in-line sockets are equipped with specially designed contacts allowing .095" (2.41mm) height above PCB. Special short contact requires .075" (1.91mm) insertion depth only. Solder tail diameter .030" (.76mm). **Insertion Characteristics:** 4-finger short contact. **Plating:** Sleeve (Pin) – 200µ" Sn. Contact (Clip) – 30µ" Au.

IC Sockets

With Integral Decoupling Capacitor Machine Screw Contact

Special Features/Applications:

• To eliminate noise at the source before it can reach the chip • Advantages for uses such as high speed logic and memory applications • To eliminate long leads as potential sources of noise because capacitor leads are connected directly to the ground and voltage pin of the socket • To save minimum of 12% on board space

Technical Data: • Insulator body material: glass filled polyester UL94V0 • Pin: screw machined Socket with integral glass encapsulated ceramic capacitor 0.1µF, 50VDC

Single In-Line Strip Sockets — Solderless Press Fit, Compliant Tail

FEATURES:
Unique compliant tail pins conforms to .040" ±.003" (1.02mm ±08mm) finished hole diameter without stressing inner layers.

APPLICATION OF COMPLIANT TAIL PINS:
Mill-Max's patented (Patent No. 4,799,904) compliant tail features precision machined pins that are hollow and slotted to conform to a .040" ±.003" (1.02mm ±08mm) diameter PTH. As the pin is inserted, the slot compresses to fit the PTH, thus avoiding damage (see illustration). The pin's tail has fine serrations that form a perfect "gas tight" connection that doesn't require soldering, and since the pin doesn't damage the hole, compliant tail sockets and connectors can be easily replaced.

Quad Flat Pack (QFP) to PGA Adapters

Features:

- Adapters convert surface mount type (SMD) Quad Flat Pack (QFP) packages to standard pin grid array through-hole packages on .100" (2.54mm) pin spacing. This allows SMD QFP packages to be used in standard PGA and PGA ZIF sockets, which is extremely useful for testing.
- SMD QFP packages are typically less expensive and often more readily available than their through-hole PGA counterparts.
- Users do not have to redesign through-hole boards in order to utilize the advantages of the SMD QFP packages.

A host of useful features including RSSI, PDN, audio ref., LVL ADJ, low-volt. detect and a microprocessor clock source are provided. Operates at 916.48MHz which in North America allows an unlimited variety of applications including data and audio links. Audio 20Hz – 28KHz, very low current for long life in battery applications. **Tx:** • Supply voltage: 2.1 – 4V • Current: 6.5 – 7.5mA • 0dbm output power • Sleep: 90µA **Rx:** • Supply voltage: 4.5 – 5.5V • Current: 5.5 – 6.5mA • Sleep: 50µA

LR Series – This receiver is ideal for the wireless transfer of serial data, control or command information in the 260 – 470MHz band • Links less than 3000 feet will benefit from a more reliable signal • Rx is Footprint compatible with popular LC-S series • 10 kbps data rate • Range in excess of 3000 feet • SMD package • No external components required (except antenna) • Operating voltage down to 2.7V • 5KHz analog BW • -112dbm receiver sensitivity typical • 5.2mA supply current typical

QS Series – Allows the rapid addition of USB to virtually any device. Housed in a compact SMD pkg., the QS Module provides a complete solution for converting between USB and TTL logic output. • Applications include interfacing Linx RF Modules, MCU's, etc. to a USB interface • 4.4 – 5VDC supply • Low current consumption, 26mA • USB Bus or self powered • No external components required (except USB jack)

MS and HS Series – Both the MS and HS Series encoders and decoders are designed for remote control applications. They allow the status of up to 8 buttons or contacts to be securely transferred via a wireless link. The MS Series 24 bit address size makes transmissions highly unique, minimizing the possibility of multiple devices having conflicting addresses. The HS Series uses a highly secure encryption algorithm with a non-repeating code to prevent unauthorized users from replicating the signal. **Features:** • 8 data lines • Low 2.0V – 5.5V operating voltage • Low supply current (370µA @ 3V) • Ultra low 0.1µA standby current • Selectable baud rates

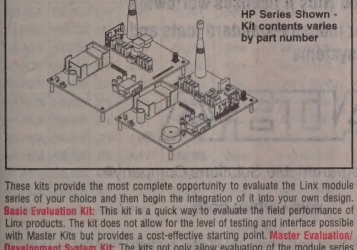
Evaluation Kits



These kits provide the most complete opportunity to evaluate the Linx module series of your choice and then begin the integration of it into your own design. **Basic Evaluation Kit:** This kit is a quick way to evaluate the field performance of Linx products. The kit does not allow for the level of testing and interface possible with Master Kits but provides a cost-effective starting point. **Master Evaluation/ Development System Kit:** The kits not only allow evaluation of the module series you have chosen, but also speed the development of your own design via on-board prototyping area and breakout headers.

ALTERA® CPLDs

Altera's Max families include the cost-optimized MAX 3000 and the high-performance MAX 7000 CPLD's, each of which offers densities, packages and speed grades to meet a variety of design needs. Altera's MAX CPLD's are non-volatile, single-chip solutions that do not require additional configuration devices. This means that they can be pre-programmed and reprogrammed using in-system programmability (ISP) and will retain the programming algorithm securely, even when the device is powered off.

Configuration Devices

During device operation, Altera® FPGA's store configuration data in SRAM cells. Because SRAM memory is volatile, the SRAM cells must be loaded with configuration data each time the device powers up. You can configure the devices using data stored in an Altera configuration device. Altera configuration devices are offered in different densities and provide a variety of features.

10/100 Full-Duplex Ethernet Option of full Media Independent Interface, or Reduced MII. Multiple DMA channels & large buffers ensure full bandwidth.

True USB 2.0 and True Full-Speed Only **NXP** ARM Microcontrollers support all modes and all 32 endpoints. The NXP ARM-based USB interfaces give you better than 8Mbps data throughput (8x performance over competitor's FS USB). Larger buffers and Multi-DMA channels prevent data-bottlenecks and off-load the processor; freeing you to do more with your application code.

Dual CAN 2.0B Two certified CAN 2.0B interfaces provide robust communications support for many products including industrial, medical, transportation, and sensor interface. Recognizes all 11- and 29-bit identifiers.

Dedicated and General, Multi-channel DMA Supporting scatter-gather, big-little endian swap, memory-to-memory, peripheral-to-peripheral, memory-to-peripheral, and peripheral-to-memory transfers on multiple channels, and a wealth of additional features; the LPC23xx makes it easy to keep your code focused on your application - not on pushing data around.

Why waste cycles paging code to RAM, servicing peripherals with small buffers, or managing interface data transfer?

NXP Semiconductors has always provided the widest range of internally-compatible, highest-bandwidth, ARM-based MCUs available: (63-MIPS) LPC2101 - through the (220-MIPS) ARM9-based LPC3180 family, all with 0-wait-state flash and consistent internal structure and features, to further protect your code investment, maximize the value of your development schedule, and help you give your products the advantages they require.

LPC2000/LPC3000/8051 Microcontrollers

LPC2000 ARM7 Microcontroller

The LPC2000 architecture is based on a 16/32 bit ARM7TDMI-S™ CPU with real-time emulation and embedded trace support. A 128 bit wide memory interface and a unique accelerator architecture enable 32 bit code execution at maximum clock rate. For critical code size applications, the alternative 16-bit Thumb™ mode reduces code by more than 30% with minimal performance penalty. Due to their tiny size and low power consumption, these microcontrollers are ideal for applications where miniaturization is a key requirement. **Features:** • 16/32 bit ARM7TDMI-S processor • Up to 8/16/32/40/64 kB on-chip Static RAM • In-System Programming (ISP) and In-Application Programming (IAP) via on-chip boot loader software • Vectored Interrupt Controller with configurable priorities and vector addresses • Embedded ICE-RT interface enables breakpoints and watch points. Interrupt service routines can continue to execute whilst the foreground task is debugged with the on-chip RealMonitor™ software. • Embedded Trace Macrocell enables non-intrusive high speed real-time tracing of instruction execution • Multiple serial interfaces

Little Doesn't Have to Mean Limited — THINK BIG. Freescale's New RS08 Core and its MC9RS08KA 8-bit MCU

RS08 Core

The RS08 core is a reduced version of the S08 central processing unit (CPU) that has been specifically designed for small pin-count devices with under 16KB memory. Thirty percent smaller than the S08 CPU, it is more efficient and cost-effective for simple electro-mechanical devices that are migrating to fully solid-state electronic operation or portable devices that have evolved into smaller or even disposable versions.

MC9RS08KA2/1

Need an ultra low-end 8-bit MCU that won't say "no" to whatever your imagination dreams up?

With more on-board flash memory than competing devices, our 8-bit MC9RS08KA microcontroller (MCU) offers endless possibilities for designers facing constant challenges of shorter windows of opportunity, very large sales volumes that require low priced bill of materials (BOM) and scarce board space. This 6-pin device addresses all of these concerns with a simple design, cost-effective pricing and a tiny 3 mm x 3 mm dual flat no-lead (DFN) package option. Two 8-pin packages are also available. KA is ideal for small, energy efficient applications.

Blackfin Processor with Flash Memory for Industrial and Peripheral Intensive Applications

BLACKfin®

The Blackfin® Processor family has been expanded to address the ever-increasing need for more connection possibilities with two new family members. This connectivity is coupled with the high performance 16-/32-bit Blackfin embedded processor core, the flexible cache architecture, the enhanced DMA subsystem, and the Dynamic Power Management (DPM) functionality. System designers can take advantage of the combined control and signal processing capabilities of the processor core across a wide range of end applications through code compatibility of these new family members with existing Blackfin offerings.

A new addition to the Blackfin Processor family is the inclusion of integrated FLASH memory alongside the processor. There are two choices available in the ADSP-BF538F family, one with 512KB of onboard FLASH memory and one with 1MB of onboard FLASH memory. Both offer large code space for complex embedded systems and fast access time to the Blackfin core. This is in addition to the complementary Blackfin Processor memory system that offers a powerful and flexible cache architecture that can dynamically balance between the hard real-time tasks desired in SRAM and soft real-time control tasks and an Operating System (OS) requiring cache functionality.

Designed as an Integrated System

In addition to the embedded connectivity of CAN, the ADSP-BF538 processors include a variety of general purpose functions designed to minimize external IC count and offer broad control and communication. Peripherals include three SPI®-compatible ports, three UARTs, four SPORT ports, three multifunction timers, 54 general-purpose I/Os, dual Two-Wire Interface for I2C operation, a real-time clock, a watchdog timer, an event controller, and a JTAG/debug interface. The flexible Parallel Peripheral Interface (PPI) offers a direct connection to a variety of video encoders/decoders, display drivers, image sensors, and general-purpose converters.

Development Tools

Blackfin Processors are supported by:

— Analog Devices CROSSCORE® brand of industry leading development tools. The CROSSCORE components include the VisualDSP++® software development environment, EZ-KIT Lite® evaluation systems, EZ-Extender™ daughter boards, and PCI-based or USB-based emulators.

— Green Hills® Software award-winning MULTI® Embedded Software Development Environment and associated emulators.

The Blackfin Processor is Supported by Analog Devices Line of Robust and Flexible Development Tools

VisualDSP++®

VisualDSP++ delivers efficient project management, enabling programmers to move easily between editing, building, and debugging within a single interface.

Key features include:

- Optimizing C/C++ compiler
- Advanced plotting tools
- Embedded OS support (VDK)
- Award-winning statistical profiling
- TCP/IP and USB support
- Free software upgrades
- Free technical support

EZ-Extender®

A variety of Blackfin EZ-Extender daughter boards are available that allow developers to connect to a number of Analog Devices High Speed Converter (HSC) evaluation boards, camera evaluation boards, and external displays. Some of the EZ-Extenders contain a USB 2.0 interface and 10/100 Ethernet MAC and advanced audio and video circuitry.

EZ-KIT Lite® Evaluation Platform

A cost-effective method for initial evaluation and for learning more about ADI hardware and software development and prototype applications.

Green Hills® Software (GHS)

Along with Analog Devices, Green Hills Software has developed a multiyear product road map for hardware and software development tools, providing full support for the Blackfin Processor.

These include:

- MULTI® Integrated Development Environment (IDE)
- C, C++, and EC++ compilers
- Green Hills® Probe and Slingshot™ Hardware Debug Devices
- INTEGRITY® Real-Time Operating System
- *velOSity*™ Microkernel

From simulation to deployment, GHS technology saves time throughout a project development life cycle with powerful features and an efficient design that eliminates having to learn different tools and user interfaces.

Blackfin Test Integration Toolkit for NI LabVIEW

National Instruments LabVIEW toolkit provides a high level method for easily building test systems and utilities for Blackfin Processor systems.

By integrating testing, engineers can iteratively verify their design throughout the development process.

Early use of the Test Integration Toolkit reduces overall development time and improves the quality of products that use the Blackfin Processor.

LabVIEW Embedded Module for Blackfin Processors

The NI LabVIEW™ Embedded Module for Analog Devices Blackfin® Processors is a comprehensive graphical development environment for embedded design.

Jointly developed by ADI and NI, this module seamlessly integrates the LabVIEW Development Environment and Blackfin Embedded Processors.

Included in the LabVIEW Embedded Module is everything required to develop your application quickly in LabVIEW and ultimately target a custom-developed hardware solution, taking designs from concept to production in a single integrated development environment.

By using this approach, engineers and scientists can achieve faster development times, lower development cost, and still deliver a high performance embedded processing solution.

Emulators

Analog Devices offers two High Performance (HP) emulator options for the Blackfin Processor. The HP PCI based emulator and the HP USB 2.0 based emulator deliver seamless exchange of real-time data from the host to the target application. These emulators are designed to take advantage of advanced features, such as the Background Telemetry Channel (BTC), a non-intrusive method for exchanging data between the host and target application without affecting the target system's real-time extended support characteristics.

Analog Devices also offers a USB 1.0 based emulator for the Blackfin Processor. This emulator offers the ease of use and portability associated with USB technology at a reduced price point.

High-performance CAN MCUs — Ideal for Crucial Real-Time Control

R8C/Tiny 22 & 23 Microncontrollers

The R8C/22 and R8C/23 are FullCAN (ver.2.0B) 16-bit MCUs optimized for industrial, automotive, and other networked system applications that must deliver good performance and reliable communication, while meeting difficult cost goals. These new additions to our popular R8C Tiny family are small in size, yet big in performance, features, and value. Their 20MHz CPU core supports a 1MB address space, includes a 16-bit multiplier and executes instructions in as fast as 50ns. The CPU's set of 89 instructions delivers high efficiency and is code-compatible with higher-functionality MCUs in the M16C family platform.

The R8C/22 and R8C/23 MCUs provide a high level of peripheral integration. Besides the on-chip FullCAN function, they have a 40MHz on-chip oscillator, POR and LVD functions, data flash memory, timers, A/D, and more. In addition, built-in LIN hardware makes these MCUs an ideal solution for a CAN-LIN gateway.

Specifications for R8C/Tiny 22, 23 MCUs:

M16C Family

The M16C family offers the industry's broadest multi-purpose microcontroller platform, with seamless code and pin compatibility – all the way from 8-bit to 32-bit functionality. A robust platform of 16/32-bit CISC microcontrollers with speeds form 16 MHz to 64 MHz, up-to 512K on-chip flash memory, high ROM code efficiency, extensive EMI /EMS noise immunity, and very low power consumption. It also features a broad choice of standard on-chip peripheral options and the highest pin-to-pin compatibility (up to 144 pins) in the industry.

R8C Tiny Series

The R8C 16-bit microcontrollers are small in size, yet big in performance and value. They excel for 8-bit embedded system applications that need low-cost devices and deliver high performance, yet save space with small low-pin count packages. These microcontrollers for general purpose applications deliver up to 20MHz speed, up to 16K of on-chip flash memory, offer versatile peripherals, and are packaged in compact LQFPs with 32 pin or less. Based on the MC16 family of 16-bit microcontrollers, the R8C Tiny inherits the same features of high performance, ROM code efficiency, low power consumption, and low noise, while its instruction compatibility allows the use of existing M16C family software resources.

SuperH™ Family

perH is an embedded RISC developed for high performance, miniaturization and performance per power consumption (MIPS/W). We are developing CPU cores for a wide range of applications and functions and have many ducts. Our product lines include the series with SH-2 as the CPU core with on-chip large capacity flash memory and peripheral functions such as timer, serial and AD converter, and the series with SH-3 and SH-4 as the CPU e which enable high-speed data processing and come equipped with cache and MMU. Additionally, there is lineup of series with SH2-DSP and SH3-DSP as the CPU core, which have full DSP funcitons and an emphasis multimedia processing and communications processing. Currently available series (products) also have lots of features such as low power mode, contributing to low power consumption and miniaturization for application dware. Various versatile operating systems and development tools have been improved and, crucially, more effecient development can be achieved.

STATIC PROTECTION

Protection of static sensitive parts is a MUST in today's semiconductor market.

To ensure the quality that Digi-Key customers have come to expect, the Digi-Key static control program includes proper static safety protection in the following areas:

- *Receiving, Incoming Inspection, and QC*
- *Order Picking*
- *Final Inspection*
- *Packaging and Shipping*

Shielded metallized bags are used in order picking, and 100% recyclable paper packaging is used in packaging and shipping.

As our program is continuously updated with the latest static control technology, you can be reassured that Digi-Key's static sensitive parts are quality safe, *all the way to your door step!*

• Please Note: SO-x packages are the same as x-SOIC packages •
